

STEALTH INTELLIGENT CONTROL PANEL

ARTIFICIAL INTELLIGENT CLOUD BASED CONTROL PANEL

- ✓ Maximize service factor on individual VFD's
- ✓ Wireless access to monitor systems & provide alerts for possible failures
- ✓ Cloud based technology to monitor, calibrate & program Smart Control Panel
- ✓ Automatic voltage sensing within a range to maximize motor service factors
- ✓ Controlling the ramping up and down of motors to minimize energy consumption

STEALTH INTELLIGENT CONTROL PANEL

Email & text alerts

Monitor sound levels

3 year live data access

External warning light notifications and displays

Monitor and report motor cycles for maintenance schedules

THIS SYSTEM FEATURES

Automatic voltage sensing within a range to maximize motor service factors

Monitor amp draw to control frequency of motors to maximize performance

Monitor motor temperatures to maximize motor life and detect possible failures

Wireless access to monitor systems and provide alerts for possible failures

Monitor internal panel temperature and possible humidity to control internal venting fans and or air conditioning systems

Monitor incoming voltage to calibrate frequency with intent to optimize motor performance assuring motor is operating within manufacturer specifications

Ability to deactivate specific motors remotely

Record & display daily energy consumption

Monitor start up torque used for motors

Monitor sound frequency for changes

Monitor energy consumption
